Abstract of **JP 2001298449 (A)**

PROBLEM TO BE SOLVED: To provide a security communication unit, system and method that can set a level of security communication by each user for data transmission, easily revise a connection parameter of various security communications and automatically set a level of the security communication with a connection destination. SOLUTION: Cross-reference information cross-referencing information of a user, using a communication terminal with a security type, is stored, and the security type is decided from the cross-reference information. Furthermore, cross-reference information cross-referencing Internet address information with the security type is stored, and the security type is decided from the cross-reference information on the basis of the Internet address information. Furthermore, the security type is inquired of a prescribed security information unit, and the security type is decided on the basis of a reply of the inquiry.
